Art Unit: 1754

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26 and 115 (group I), drawn to a method for removing SO_x from a gas, classified in class 423, subclass 243.06+.
- II. Claims 27-48 (group II), drawn to a scrubber, classified in class 422, subclass 168+.
- III. Claims 49-61, 92-114, 116 and 117 (group III), drawn to a method for making thiosulfate, classified in class 423, subclass 514+.
- IV. Claims 62-91 (group IV), drawn to a thiosulfate reactor system, classified in class 422, subclass 129+.

The inventions are distinct, each from the other, because each of the inventions set forth in the claims of each of groups I-IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any selected group of claims is capable of supporting its own patent without requiring any of the other non-selected group of claims. The subcombination has separate utility such as the utilities described for each of the group of claims: for example, the utility of the claims of

Application/Control Number: 09/923,559

Art Unit: 1754

group I is drawn to the removal of SO_x out of a gas which is separate and distinct from the utility of the claims of group III, which is drawn to a process for making thiosulfate.

Because these inventions are distinct for the reasons given above and the claims set forth in groups I-IV have acquired a separate status in the art as shown by their different classification; the search required for any selected group of clams is not required for any of the other non-selected groups of claims and the claims set forth in groups I-IV have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The applicants are advised that in order for their reply to this requirement to be considered complete, it must include an election of the invention to be examined - even though this requirement may be traversed (37 CFR 1.143).

The applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
